Advanced Operations Software Package FlexSym OLT6

Tellabs Advanced Operations Software Package helps control processes and ensure policy consistency with more automated and M2M actions. It enables the end-to-end enterprise LAN to be controlled in a software defined management manner. In turn, process and policy consistency is improved, and fewer IT resources are needed to manage the daily network activities allowing IT staff to focus on other more critical tasks.

Features

- Uses Tellabs' industry-leading software-defined global profiles, traffic management, security, provisioning and traffic management mechanisms
- Global policies increase automation with more machine-to-machine actions and limiting human-to-machine actions
- Reduce mission-critical yet repetitive operational tasks to effectively zero dollars
- Providing quick views, fast isolation and easy drill-down uncovers root causes and speeds resolution

Highlights

Smart

The global templates and policies ensure consistency with IT policies and procedures across all business locations. This leads to improved operational efficiencies, better network availability and a more secure network.

Simple

From one screen, global templates and profiles associated with user, service, connection and/or port. Once profiles are saved, settings can be assigned to an ONT or port with one click or automated at turn-up based on MAC identifier.

Scalable

These global templates and profiles enables the IT staff to scale the initial commissioning of an OLT across hundreds of VLANs and thousands of ONTs and subtended powered devices (PDs), such as phones, WAPs and IP cameras.

Specifications

Software Support

- Minimum base software SR31.2

Installations
